FUTURARC

The Voice of Green Architecture in Asia-Pacific

Next Issue:

FuturArc

January-February 2018

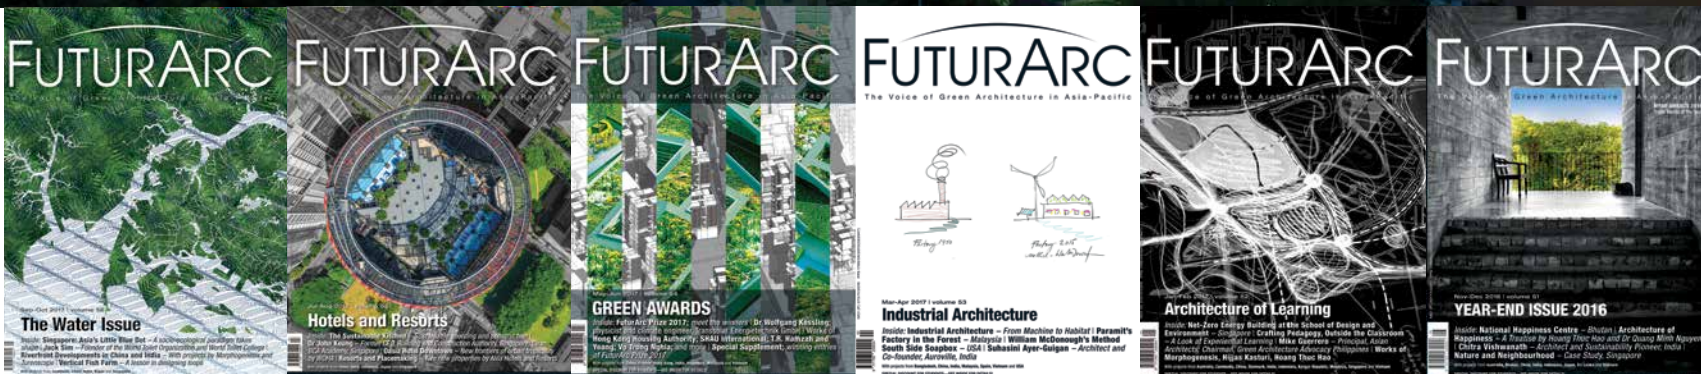

Designing for Climate Change

Green architecture and passive designs play a significant role in reducing carbon footprint in our fragile environment. In this issue, we look at select Asian cities and developments with environmentally responsible designs that connect with nature and adapt to climate change. These projects seek to address the issue of carbon emissions in the built environment, operating with smart designs and technologies that attempt to moderate the increasingly volatile climatic forces.

If you have projects to nominate, please send an email with a brief profile and photos to c.lim@futurarc.com by end November 2017.

We will notify you if your project is shortlisted for publication. Please note that the selection of projects is subject to editorial discretion.
